

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Summary

### YOUR RESPONSIBILITY:

To protect your employees from exposure to respiratory hazards in the workplace by identifying and controlling the hazards

#### You must

Identify and evaluate respiratory hazards WAC 296-841-20005 .....	200-2
Control employee exposures WAC 296-841-20010 .....	200-4
Use respirators WAC 296-841-20015 .....	200-6
Notify employees WAC 296-841-20020 .....	200-6
Permissible exposure limits of air contaminants WAC 296-841-20025 .....	200-8

Evaluate and Control  
Employee Exposure

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Rule

**WAC 296-841-20005**

### Identify and evaluate respiratory hazards

#### You must

- Make sure employees are protected from potentially hazardous exposure while you perform your evaluation
- Perform your evaluation without considering the protection provided to employees by a respirator
- Determine the form of the hazard, such as dust, mist, gas, oxygen deficiency, or biological agent.
- Make sure you consider:
  - Potential emergency and rescue situations that may occur, such as equipment or power failures, uncontrolled chemical reactions, fire, explosion, or human error
  - Workplace conditions such as work processes, types of material, control methods, work practices and environmental conditions.
- Determine or reasonably estimate whether any employee is or could be exposed to any of the following:
  - Any airborne substance above a permissible exposure limit (PEL) listed in Table 3
  - A substance at or above the action level (AL) specified in the rule for that substance
  - Any other respiratory hazard.

-Continued-

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Rule

### WAC 296-841-20005 (Continued)

#### You must

- Use **any** of the following to determine employee exposure:
  - Information that would allow an estimate of the level of employee exposure, such as MSDSs or pesticide labels, observations, measurements or calculations
  - Data demonstrating that a particular product, material or activity can't result in employee exposure at or above the AL or PEL
  - Personal air samples that represent an employee's usual or worst case exposure for the entire shift.

#### Note:

- Rules for specific substances may contain additional requirements for determining employee exposure.
- Use methods of sampling and analysis that have been validated by the laboratory performing the analysis.
- Samples from a representative group of employees may be used for other employees performing the same work activities when the duration and level of exposure are similar.

Evaluate and Control  
Employee Exposure

#### You must

- Consider the atmosphere to be immediately dangerous to life or health (IDLH) when you can't determine or reasonably estimate employee exposure
- Make sure employee exposure, to 2 or more substances with additive health effects, is evaluated using this formula:

-Continued-

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Rule

### WAC 296-841-20005 (Continued)

$$E_m = \frac{C_1}{L_1} + \frac{C_2}{L_2} + \dots + \frac{C_n}{L_n}$$

The symbol	Is the
E	Equivalent exposure for the mixture. <b>When the value of E is greater than 1, a respiratory hazard is present.</b>
C	Concentration of a substance.
L	TWA, STEL, or ceiling for that substance, from Table 3.

#### Helpful Tool:

#### Mixtures of Airborne Substances

You can find additional information about mixtures of airborne substances in the Resources section of this chapter.

### WAC 296-841-20010

### Control employee exposures

#### IMPORTANT:

Using respirators and other PPE isn't a substitute for the feasible controls required by this section.

#### You must

- Use feasible controls to protect employees from exposure to respiratory hazards by:
  - Reducing employee exposure to a level that removes the respiratory hazard, such as to a level below the permissible exposure limit (PEL) in Table 3

or

- Reducing the exposure to the lowest achievable level, when the respiratory hazard can't be removed.

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Rule

### WAC 296-841-20010 (Continued)

**Note:**

➤ The following table gives you examples of control methods.

**Table 1**  
**Examples of Possible Controls**

<b>Control</b>	<b>For example</b>
Using a different chemical (substitution)	<ul style="list-style-type: none"><li>Choose a chemical with a lower evaporation rate or vapor pressure</li><li>Choose a chemical without hazardous ingredients</li></ul>
Changing a process to lessen emissions	<ul style="list-style-type: none"><li>Use hand rolling or paint dipping instead of paint spraying</li><li>Bolt items instead of welding them</li></ul>
Separating employees from emissions areas and sources	<ul style="list-style-type: none"><li>Use control rooms</li><li>Build an enclosure around process machinery or other emissions sources</li><li>Automate a process</li></ul>
Removing emissions at or near the source (local exhaust ventilation)	<ul style="list-style-type: none"><li>Install exhaust hoods or slots to capture emissions</li><li>Use an exhausted enclosure (like a blasting cabinet or laboratory hood)</li></ul>
Diluting and removing emissions in the work area (general exhaust ventilation)	<ul style="list-style-type: none"><li>Allow natural air movement to create an adequate airflow through an area</li><li>Use mechanical fans</li></ul>
Modify work practices	<ul style="list-style-type: none"><li>Change the position of the worker relative to the work so fumes, vapors, or smoke doesn't go into their face</li></ul>
Rotate employees – Some specific rules prohibit the use of this control method	<ul style="list-style-type: none"><li>Move employees to another job that's without exposure, on a schedule to keep their total exposure below the permissible exposure limit</li></ul>

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Rule

**WAC 296-841-20015**

### Use respirators

#### You must

- Require employees to use respiratory protection when respiratory hazards haven't been removed using feasible controls. For example, use respirators at any of the following times:
  - While controls are being evaluated or put in place
  - When the respiratory hazard isn't completely removed
  - When controls are **not** feasible.

#### Reference:

- See chapter 296-842 WAC, *Respirators*, for respirator program requirements.

**WAC 296-841-20020**

### Notify employees

#### You must

- Notify employees who are, or may be, exposed to respiratory hazards, as specified in Table 2.

#### Note:

- The notification may be provided either individually, to a group, or by posting of results in an appropriate location that is accessible to affected employees.

-Continued-

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Rule

### WAC 296-841-20020 (Continued)

Table 2  
Notification Requirements

Notify employees of	As follows
Any exposure result above a permissible exposure limit (PEL)	Within 5 business days, after the employee's exposure result is known to the employer
The corrective action being taken to reduce employee exposure to or below the PEL <b>and</b> The schedule for completion of the corrective action and any reasons why exposures can't be lowered to below the PEL	Within 15 business days, after the employee's exposure result is known to the employer
An exposure to these substances: <ul style="list-style-type: none"><li>• Acrylonitrile</li><li>• Arsenic (inorganic)</li><li>• Asbestos</li><li>• Benzene</li><li>• Butadiene</li><li>• Cadmium</li><li>• Coke oven emissions</li><li>• Cotton dust</li><li>• 1,2-Dibromo-3-chloropropane</li><li>• Ethylene oxide</li><li>• Formaldehyde</li><li>• Lead</li><li>• Methylene chloride</li><li>• Methylenedianiline</li><li>• Vinyl chloride</li></ul>	In writing, as specified in the rule specific to the substance

Evaluate and Control  
Employee Exposure

# Evaluate and Control Employee Exposures

WAC 296-841-200

## Rule

**WAC 296-841-20025**

### Permissible exposure limits of air contaminants

#### **IMPORTANT:**

The following information applies to Table 3, Permissible Exposure Limits for Air Contaminants.

- Exposure needs to be determined from personal air samples taken in the breathing zone **or** from monitoring representative of the employee's breathing zone.
- Ppm refers to parts of vapor or gas per million parts of air by volume, at 25° C and 760 mm Hg pressure.
- Mg/m<sup>3</sup> refers to milligrams of substance per cubic meter of air.
- For a metal that's measured as the metal itself, only the CAS number for the metal is given. The CAS numbers for individual compounds of the metal aren't provided. For more information about CAS registry numbers see the website: <http://www.cas.org>.
- Time weighted averages (TWA<sub>8</sub>) represent the maximum allowed average exposure for any 8-hour time period. For work periods longer than 8-hours the TWA<sub>8</sub> needs to be determined using the 8 continuous hours with the highest average concentration.
- Short-term exposure limits (STEL) represent maximum allowed average exposure for any 15-minute period, unless another time period is noted in Table 3.
- The ceiling represents the maximum allowed exposure for the shortest time period that can feasibly be measured.
- An "X" in the "skin" column indicates the substance can be absorbed through the skin, either by airborne or direct contact.
- Requirements for the use of gloves, coveralls, goggles, and other personal protective equipment can be found in WAC 296-800-160.
